

## Join PSIC

**Innovation, Integration, Interoperability**

### Participate in PSIC

**The Public Security Innovation Center (PSIC):**

- Offers an open, independent platform to any participating vendor with a proven technology in the field of public security, broadly defined;
- Provides a state-of-the-art venue in which to simulate real-life scenarios and demonstrate public security technologies;
- Brings together solution providers in an environment of collaboration, integration and interoperability;
- Creates opportunities to market and sell to end-users worldwide through demonstrations, trade missions, conferences and special events;
- Carries out market research, market entry and international sales channel development for PSIC Participants.

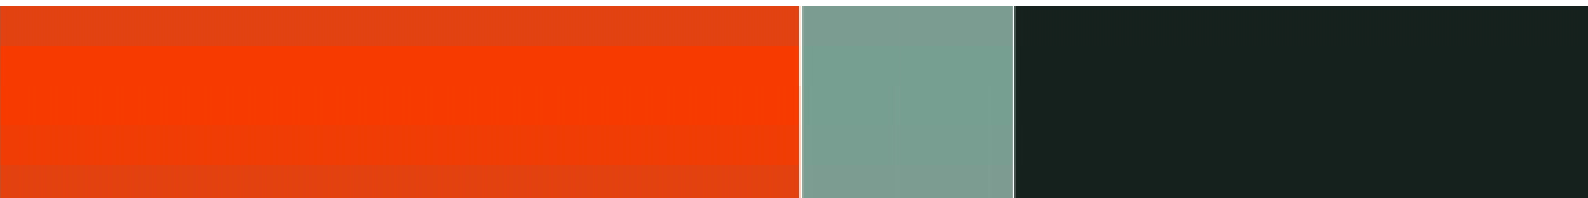

### Become a PSIC Participant

PSIC brings together public security technology innovators. These are the participating companies, or PSIC Participants, which represent a wide range of information management and physical security solutions. They have been vetted and have demonstrated proven technologies through a number of criteria in order to participate in the forum.

Most PSIC Participants are small- to medium-sized enterprises (SMEs) that foster innovation as part of their corporate culture and can benefit from a collaborative environment to maximize business value.

By bringing Participants together, PSIC fosters the application of all forms of technology to deliver more effective emergency decision-making for natural, technological and terrorist events.

As a result, Participants innovate new technologies and develop specific solutions for clients, the end-users.

## Participating Companies

PSIC Participating companies are highly specialized in a wide range of safety- and security technologies including: voice-, data- and video communication, physical-, network- and biological sensors, geospatial intelligence and analytical models, incident command, operations center management, biometric access control, hazard forecasting and vulnerability analysis, handheld wireless data sharing, visualization and situational awareness, computer-aided dispatch, collaboration and planning, surveillance and smart video analytics.

## Bringing Technologies Together

PSIC brings these technologies together and fosters collaboration and further innovation for end-users such as local governments, voluntary organizations, private companies and the public sector.

All companies with public security products and services that comply with data exchange standards are welcome to become a Participant in PSIC. In so doing, companies can collaborate in a dedicated environment and demonstrate solutions to clients recruited by PSIC.
